

KAZI MIDUL HOSSEN

Sr. Data Engineer

Mobile :+880 1621529019

Email: kazimridul32@gmail.com

OBJECTIVE

Experienced Data Engineer and Backend Software Engineer with 5+ years of expertise in designing and implementing scalable data pipelines, ETL/ELT workflows, and building reliable backend systems. Proficient in Python, SQL, and Java, with hands-on experience in Spring Boot, Spring Security, Kafka, DBT, Apache Airflow, AWS (EC2, S3, Lambda, Glue, Cognito), GCP (BigQuery, GCS, Cloud Run Jobs), Azure (Data Factory, Blob Storage, Functions), CI/CD (Jenkins, Github action) and Terraform for cloud infrastructure management. Skilled in containerization (Scaleway, Docker), relational and NoSQL databases, and data integration, authentication systems (Auth0, Cognito), and API development (including OpenAI API).

Combining deep data engineering expertise with a solid foundation in software architecture and backend engineering, I excel at building end-to-end data-driven solutions that are efficient, secure, and scalable.

SKILLS & ABILITIES

Programming & Scripting:

Java, Python, JavaScript, SQL, Bash/Shell

Framework/Library:

Spring Boot, Spring Security, Pandas, Boto3, Kafka, NumPy, Spring Hibernate/JPA, JDBC, Selenium, SpringMail, PDFBox

Database:

SQL Server, PostgreSQL, MySQL, MongoDB, InfluxDB

Streaming & Messaging:

Kafka, RabbitMQ

Data Engineering & Orchestration:

dbt, Apache Airflow

Infrastructure & IaC:

Terraform

Cloud:

AWS: EC2, Lambda, S3, Glue, CloudWatch

Azure: Data Factory, VMs, Azure Functions, Blob Storage

GCP: VMs, BigQuery, Cloud Job/service, cloud stream

EXPERIENCE (05+ YEARS)

Oct 2022 - Present

Sr. Data and Software Engineer

Be Data Solutions Limited

- Built ELT pipelines using DBT for scalable data transformation and modeling.
- Developed API-based data ingestion pipelines to pull data into BigQuery.
- Built Google Cloud jobs/services to automate and orchestrate data extraction from APIs.
- Used Apache Airflow for workflow orchestration, scheduling, and monitoring of data pipelines.
- Implemented CI/CD pipelines using GitHub Actions for automated testing and deployment.
- Used Google Cloud Datastream to synchronize data from PostgreSQL (PSQL) to BigQuery.
- Designed end-to-end ETL process for CSV/JSON data to billing reports.
- Automated email notifications for success/failure.
- Automated SQL Server data extraction and report generation.
- Built and maintained ETL workflows for data ingestion, transformation, and storage.
- Integrated third-party APIs and generated CSV outputs.
- Developed backend APIs, integrated OpenAI and Auth0, deployed on cloud with container management.
- Designed Spring Boot backend, implemented AWS Cognito auth, deployed on EC2, and used S3/SQL Server.
- Full-stack development using Anvil; handled both frontend and backend with Anvil's database.
- Automated infrastructure deployment with Terraform scripts for scalable and efficient management.
- Implemented Azure Blob Storage for secure and scalable data storage, supporting large-scale data operations.
- Leveraged Azure Functions for automation, improving workflows and operational efficiency.
- Utilized CI/CD pipelines to streamline infrastructure management and ensure rapid, reliable updates.
- Designed and built high-performance data warehouses, centralizing and optimizing data access for enhanced analytics.
- Integrated AWS Lambda for serverless processing and automation, reducing overhead and improving flexibility.

- Leveraged Amazon S3 Buckets for secure, scalable data storage solutions, supporting seamless data handling.
- Designed and implemented efficient ETL pipelines with AWS Glue for data transformation and loading

Mar 2020 – Oct 2022

Junior Software Engineer

Naztech Inc

- Automated document handling processes, significantly reducing manual effort and improving operational efficiency.
- Designed and implemented backend services using Spring Boot, integrated email workflows with Spring Email, and processed documents with PDFBox.
- Managed relational data storage with MS SQL Server and ensured data consistency across the system.
- Developed a robust data pipeline to deliver real-time SMS notifications for banking transactions.
- Built scalable pipelines for extracting and analyzing job statistics from multiple sources.
- Collaborated across all phases of the Software Development Life Cycle (SDLC), including design, development, testing, and deployment.

Education

Bachelor of Science in Computer Science & Engineering

Southeast University

Diploma in Engineering: Computer Technology

Dhaka Polytechnic Institute

Programming contest:

2019-ICPC Dhaka Regional

Team Name: bi_solution

Coach Name: Mizanur Rahman

Ranking: 137

Project experience:

LDS (Little Dot Studios)

- Developed and maintained data pipelines to ingest data from Facebook Graph API and Google Ad Manager (GAM) into Google BigQuery.
- Automated the extraction and processing of data from Facebook remittance PDF reports and loaded structured data into BigQuery.
- Designed and implemented ELT pipelines using DBT for scalable and maintainable data processing.
- Developed data transformation and modeling workflows using DBT to prepare analytics-ready datasets.

- Built and maintained CI/CD pipelines to automate data pipeline deployment and improve development and release workflows.
- Used Google Cloud Datastream to synchronize data from PostgreSQL (PSQL) to BigQuery.
- Used Apache Airflow for workflow orchestration, scheduling, and monitoring of data pipelines.

Acacium Group

- Built an efficient ETL pipeline using Azure Data Factory.
- Leveraged Azure Functions for seamless automation.
- Developed Terraform scripts to streamline infrastructure deployment.
- Utilized Azure Blob Storage for secure and scalable data storage.
- Implemented CI/CD pipelines to ensure smooth infrastructure management and updates.

NRS

- Designed and executed a robust ETL process using Azure Data Factory for seamless data integration.
- Automated infrastructure deployment with custom Terraform scripts for scalability and efficiency.
- Built a powerful data warehouse to centralize data storage for enhanced analytics.

Elias Data Pipeline

- Implemented an ETL process to retrieve data from third-party APIs, process the data, and generate CSV files for downstream consumption.

Technologies Used:

AWS Glue, Amazon S3, AWS Lambda

Datahead Application

- Designed and developed backend services using Java Spring Boot, Spring Security, integrated authentication using AWS Cognito, and deployed services on AWS EC2. Managed file storage using Amazon S3 and connected to SQL Server for data persistence.

Technology:

Java Spring Boot, SQL Server, AWS Cognito, Amazon EC2, Amazon S3

Document Management System

- Reduced manual effort by automating document handling processes.

Technology: Spring boot, spring email, pdf-box, MS-SQL.

SMS Service

- Delivered SMS notifications for banking transactions through a reliable data pipeline.

Technology: Spring boot, Kafka, Redis, MS-SQL, Poi, gson.

Job Data Extractor

- Built scalable pipelines for extracting and analyzing job statistics

Technology: Spring Boot, Selenium, JSoup, RabbitMQ, MS-SQL.
